2027-28 ENROLLMENT OPEN

A FUTURE-READY PROSPECTUS

Prepare your child for an *algorithmic* world.

An AI Tutor that adapts to pace and level. Industry-trained faculty. A life coach for confidence, communication and leadership. All from the safety of home.

Strong academics. Real-world skills. *Powered by an AI Tutor.*

Personalised learning isn't just "more content." It's the right sequence, the right pace, and the right support — so every learner builds mastery and confidence.

PILLAR / 01

AI Tutor

Adaptive learning that matches each child's pace, level and goals. Closes gaps before they widen; accelerates strengths.

PILLAR / 02

Industry-Trained Faculty

Clear explanations, high standards, and expert mentoring from educators with real-world experience.

PILLAR / 03

Life Coach & Life Skills

Discipline, confidence, communication and leadership — built deliberately, not by accident.

PILLAR / 04

Talent Farming

Identify strengths early. Nurture them consistently. Build a portfolio that opens doors.

"Our students learn from the safety of home — with a structured plan, personalised paths, and progress tracking. Parents get clarity without supervising every session."

— AALGORIX ACADEMY

A simple system that delivers results.

THE FOUR-STEP METHOD • PAGE 02

01

ASSESS

Baseline check to understand level, gaps and strengths.

02

PERSONALISE

AI-first curriculum and supplementary plan for mastery.

03

COACH

Faculty guidance and life coach for consistency, motivation.

04

TRACK

Clear, simple, actionable progress updates for parents.

Twelve skills. *One algorithmic world.*

Beyond every test and grade sit twelve skills that decide what kind of adult a child becomes. We teach them on purpose — woven into academics, mentorship and daily practice.

01 Asking Better Questions

Our AI Tutor refuses to hand out shortcut answers. Students are coached to ask "**what am I missing?**" before "**what's the answer?**" — turning confusion into a clear next step.

02 Clear Writing

Weekly writing exercises rewrite one messy idea into three clear sentences. Faculty feedback proves **clarity of thought**, not just polished sentences.

03 Public Speaking

Every student explains one thing they learned — out loud, every week. The life coach builds the habit of **making ideas easy to follow** for any audience.

04 Smart AI Use

Our core differentiator. Students learn to use AI for drafts, then **question, check and improve** against trusted sources. AI literacy as a basic discipline — not a parlour trick.

05 Problem Framing

Before any solution, students write "**the real issue is...**" Project-based learning trains them to find the right problem before searching for clever answers.

06 Financial Basics

From Grade 6 onwards, students build a **fake monthly budget** and choose what to cut. Money choices are taught as the things they really are — choices about freedom, stress and options.

The other six *that change everything.*

The skills schools rarely grade for — yet they shape every interview, every relationship, every decision a child will make as an adult.

07 Collaboration

Small-batch group projects train students to **listen, disagree and contribute**. The default question becomes "what does the team need from me next?"

08 Digital Judgment

In an AI-flooded world, students learn to ask "**who benefits if I believe this?**" before sharing. They leave knowing what online deserves trust, attention or silence.

09 Career Navigation

Through our **Talent Farming** programme, Grade 11–12 students build a portfolio and learn to message someone with a job they want to learn about. Opportunities come from clarity, curiosity, follow-up.

10 Emotional Regulation

Our life coach teaches the **ten-second pause** before replying when things feel tense. Calm becomes a skill that's practised, not a personality trait you're born with.

11 Adaptability

Plans change. Our project work deliberately shifts mid-stream, training students to ask "**what still works?**" — the question of every future-proof adult.

12 Learning How To Learn

Every week ends with a reflection ritual: **what worked, what didn't, what will I try next?** The most important skill — knowing how to practise, reflect and adjust — is built one Friday at a time.

// SUPPORT THAT WRAPS AROUND THE LEARNING

Regulated Screen Time

Balanced guided learning, self-study and offline activity — engaged, never over-exposed.

Special Learning Needs

Flexible pacing and closer mentor guidance for learners who need more care.

Parent Progress Reports

Clear, simple updates so parents see growth without supervising every session.

An AI-first curriculum with *international* board affiliation.

Built to prepare children for an algorithmic world — with a strong academic base and a consistent focus on real-world skills and life skills.

3–5

FOUNDATIONS

Confidence in basics + curiosity-led learning

AGES 8–10

The youngest learners build strong literacy, numeracy and a love for asking questions. AI Tutor scaffolding keeps the difficulty just right — never too easy, never overwhelming.

6–8

EXPLORE

Concept depth, projects and structured habits

AGES 11–13

Students move from skill-acquisition into real projects. Financial basics, problem framing and collaboration are introduced as everyday vocabulary, not extras.

9–10

BUILD
CONCEPTS

Mastery and supplementary courses to close gaps

AGES 14–15

The AI Tutor identifies weak areas with precision and recommends supplementary modules. Faculty mentoring deepens. Public speaking, clear writing and digital judgment become non-negotiables.

11–12

FUTURE READY

Real-world skills, portfolio and outcomes

AGES 16–18

Talent Farming peaks: each student builds a portfolio aligned to their strengths. Career navigation, smart AI use and adaptability are practised against real briefs from industry partners.

"We support many learners who need extra attention — through personalised pacing, structured routines, and closer mentor guidance. Share your child's needs at admission and we'll recommend the right plan."
