HOME SCHOOL
2027-28 ENROLLMENT OPEN

A FUTURE-READY PROSPECTUS

Prepare your child for an *algorithmic* world.

An AI Tutor that adapts to pace and level. Industry-trained faculty. A life coach for confidence, communication and leadership — all from the safety of home.

What's inside *this prospectus.*

Twenty-eight pages on how we teach, why we teach it that way, and the kind of adult your child becomes when the work is done.

PART I – WHO WE ARE

§ 01	A letter from the founders	03
§ 02	Why now — The changing world	04
§ 03	The Aalgorix approach — Four pillars	05
§ 04	The four-step method — Assess · Personalise · Coach · Track	06
§ 05	A day in the life	07
§ 06	The yearly rhythm	08

PART II – THE 12 FUTURE-READY SKILLS

§ 07	Twelve skills, one algorithmic world	09
§ 08	01 · Asking Better Questions	10
§ 09	02 · Clear Writing	11
§ 10	03 · Public Speaking	12
§ 11	04 · Smart AI Use	13
§ 12	05 · Problem Framing	14
§ 13	06 · Financial Basics	15
§ 14	07 · Collaboration	16
§ 15	08 · Digital Judgment	17
§ 16	09 · Career Navigation	18
§ 17	10 · Emotional Regulation	19
§ 18	11 · Adaptability	20
§ 19	12 · Learning How to Learn	21

PART III – HOW IT ALL COMES TOGETHER

§ 20	Programmes by grade	22
§ 21	Talent Farming — A deeper look	23
§ 22	Faculty, life coach & special learning needs	24
§ 23	Our AI collaborations	25
§ 24	Tech & tools at home	26
§ 25	Admissions — How to enrol	27
§ 26	Talk to admissions	28

→ WHY WE BUILT THIS SCHOOL

Dear parent, *thank you* for looking.

We started Aalgorix World Academy for a single, simple reason. The world our children will graduate into is unlike anything we were prepared for — and traditional school is, in many small ways, still teaching to a world that no longer exists.

We watched our own children sit through hours of content, take tests built for memorisation, and graduate without ever being asked to **frame a problem, question an AI's answer, or make a small financial decision**. We saw bright kids who could recite formulas but struggled to write three clear sentences. We saw confident speakers in front of mirrors who froze in front of three classmates.

So we built something different. An AI Tutor that adapts to the child rather than the other way round. Industry-trained faculty who teach concepts the way someone who has actually **used** them would. A life coach who builds confidence, calm and clarity into the week. And a programme called Talent Farming that finds what each child is good at — and patiently helps them get great at it.

This prospectus is our most honest attempt to explain how it all works. If you read to the end, you'll know exactly what to expect — and exactly what we ask of you in return.

We hope it speaks to you.

— Team Aalgorix

FOUNDERS & FACULTY

→ THE CHANGING WORLD

The rules of school have *quietly changed.*

Three things happened in the last five years that most schools have not yet absorbed. They aren't separate trends — they compound. Together, they redefine what it means to be educated.

SHIFT / 01

AI can produce the answer

Any question your child will see on an exam can now be answered by AI in seconds. The premium has shifted from **knowing the answer** to **asking the right question, checking the answer, and using it well.**

SHIFT / 02

Information is no longer scarce

The bottleneck used to be access to content. Today the bottleneck is **judgment** — knowing what to trust, what to ignore, and what to act on amidst an overwhelming flood of information.

SHIFT / 03

Careers no longer come pre-packaged

The jobs your child will hold may not exist yet. Career paths are increasingly **built, not chosen** — through portfolios, networks, and the ability to learn new things quickly. Old certificates matter less than they used to.

SHIFT / 04

Attention is the new battleground

Children grow up with algorithms designed to capture their attention. The skill of **regulating attention** — knowing when to focus, when to rest, when to pause — has become as important as literacy.

"You can't future-proof a child against a future you don't know. You can only give them the underlying habits — clarity, judgment, AI fluency, calm — that work in any future."

— THE THESIS BEHIND AALGORIX

→ FOUR PILLARS

Strong academics. Real-world skills. *Powered by AI.*

*Four pillars hold the whole structure up.
Pull one out and the rest weaken.*

PILLAR / 01

AI Tutor

Adaptive learning that matches each child's pace, level and goals. Closes gaps before they widen; accelerates strengths without making the work overwhelming.

PILLAR / 02

Industry-Trained Faculty

Clear explanations, high standards, and expert mentoring from educators with real-world experience — not just textbook teachers.

PILLAR / 03

Life Coach & Life Skills

Discipline, confidence, communication and leadership — built deliberately into the week, not left to chance or the rare inspirational moment.

PILLAR / 04

Talent Farming

Identify strengths early. Nurture them consistently. Build a portfolio that opens doors when the child is ready to walk through them.

"AI is only useful when you can question, check, and improve it. Our students learn to do exactly that — not chase shortcuts, but build judgment."

— ON SMART AI USE

→ FOUR STEPS, ONE SYSTEM

A simple system that *delivers* results.

We don't add more content. We add the right sequence, the right pace, and the right support.

01

ASSESS

A baseline check at the start. We map every learner's level, gaps and strengths before recommending a single module — so the plan fits the child, not the other way round.

02

PERSONALISE

An AI-first curriculum is shaped to the child. Supplementary courses target weak areas; advanced modules stretch strengths. Same syllabus, very different paths.

03

COACH

Faculty guidance keeps the academics rigorous. A life coach builds the consistency, confidence and follow-through that decide whether knowledge becomes capability.

04

TRACK

Parents get progress updates that are clear, simple, and actionable — no jargon, no surprises. You always know where your child is and where they're heading next.

→ WHAT A TYPICAL DAY LOOKS LIKE

Structured. Balanced. *Never overwhelming.*

Screen time is regulated. Offline activity is built in. Reflection closes the day. A learner-friendly rhythm — not eight hours staring at a screen.

08:30 — 09:00

Morning ritual & intention-setting

A short check-in with the life coach. What worked yesterday, what didn't, and one focused goal for today.

LIFE COACH

09:00 — 11:00

Core academics with the AI Tutor

Adaptive sessions in maths, science or language. The tutor recommends modules calibrated to current level — never too easy, never overwhelming.

AI TUTOR

ADAPTIVE

11:00 — 11:30

Offline break

Snack, fresh air, no screens. Discipline that gets built by routine, not lectures.

WELLBEING

11:30 — 13:00

Live faculty session

Small-batch class with an industry-trained teacher. Concept depth, doubt clearing, and one real-world example tied to the day's topic.

FACULTY

13:00 — 14:00

Lunch & rest

An unhurried break. Energy management is taught early.

14:00 — 15:30

Project, portfolio or supplementary work

Open studio time. This is where Talent Farming happens — a coding project, a writing piece, an art portfolio, a science investigation.

TALENT FARMING

PORTFOLIO

15:30 — 16:00

Reflection & close

The week's most important fifteen minutes. What worked, what didn't, what will I try tomorrow? Learning how to learn — built one day at a time.

REFLECTION

→ HOW A YEAR UNFOLDS

A year that builds on *itself*.

Four terms. Four big questions. The skills compound from one term to the next.

Q1

TERM 1 • SET UP

Baseline assessment, personalised plan, routine-building with the life coach. We invest the first six weeks getting the foundations right — pace, habits, AI Tutor calibration.

Q2

TERM 2 • BUILD

Heaviest academic load. Concepts go deep, supplementary courses kick in for weak areas, and the first major project — usually cross-subject — kicks off Talent Farming.

Q3

TERM 3 • APPLY

Project peaks. Public speaking events. AI Use challenges. Students present what they've built to family and faculty. Real-world skills get tested against real-world briefs.

Q4

TERM 4 • REFLECT

Portfolio finalised. Reflection report for parents. The 12 skills audit. A personalised plan for next year — informed by everything we've learned about your child.

"A school year shouldn't feel like a marathon you survive. It should feel like a story that builds — with rising stakes, a meaningful peak, and a thoughtful close."

— ON THE YEARLY RHYTHM

Twelve skills. *One algorithmic world.*

Beyond every test and grade sit twelve skills that decide what kind of adult a child becomes. We teach them on purpose — woven into academics, mentorship and daily practice. The next twelve pages explain each one.

01 • THINKING

Asking Better Questions

Good questions turn confusion into a clear next step.

01

// WHY IT MATTERS

Most schools reward fast answers. The world rewards good questions. AI can produce any answer instantly — what AI cannot do is ask the right question of itself. That is the human moat. A child who learns to interrogate a problem before solving it learns the most transferable skill there is.

// HOW WE TEACH IT

Our AI Tutor will not hand out shortcut answers. When a student is stuck, the first prompt is always **"what am I missing?"** — not **"what's the answer?"** Faculty model the same thinking in live sessions. By Grade 6, students naturally reach for the question before the answer.

// TRY THIS AT HOME

Next time your child says "I don't get it," don't explain. Ask: "What part do you get? Where exactly does it stop making sense?" The pause itself is the lesson.

"Confusion isn't a problem. It's a signal. We teach kids to read it."

— FACULTY NOTE • ASKING BETTER QUESTIONS

02 • COMMUNICATION

Clear Writing

Clear writing proves clear thinking.

02

// WHY IT MATTERS

Writing well isn't a literary skill — it's a thinking skill. If a child can't write three clear sentences about an idea, they probably haven't fully understood the idea. The opposite is also true: students who learn to write clearly become measurably better learners across every subject.

// HOW WE TEACH IT

Every week, every student rewrites one messy idea into **three clear sentences**. Faculty mark for clarity of thought, not just grammar. By Grade 9, students are writing memos that adults would be proud of — short, structured, and obviously thought-through.

// TRY THIS AT HOME

Ask your child to explain something they learned at the dinner table — in three sentences. Don't accept rambling. The constraint is the teacher.

*"If you can't say it in three sentences, you don't yet **know** it."*

— FACULTY NOTE • CLEAR WRITING

03 • COMMUNICATION

Public Speaking

Speaking well is making ideas easy to follow.

03

// WHY IT MATTERS

Most public speaking courses focus on confidence. We focus on something more useful — clarity. A nervous speaker who delivers a clear message will always outperform a confident speaker who rambles. Confidence follows clarity, not the other way around.

// HOW WE TEACH IT

Every Friday, every student explains one thing they learned that week — out loud, to a small group. The life coach coaches structure first, presence second. By Grade 10, students can hold a five-minute room without notes — and parents notice the difference at family dinners.

// TRY THIS AT HOME

On Sundays, ask your child to teach you something they learned that week. Listen attentively. Don't correct mid-sentence. The act of teaching is the skill.

"Confidence comes from clarity. Clarity is rehearsable. So is confidence."

- FACULTY NOTE • PUBLIC SPEAKING

04 • AI FLUENCY

Smart AI Use

AI is only useful when you can question, check, and improve it.

04

// WHY IT MATTERS

This is our core differentiator. Every child in the world will use AI. Few will use it well. The difference between a child who reaches for AI to do their homework and a child who uses AI as a thinking partner is enormous – and that difference will shape careers for the next thirty years.

// HOW WE TEACH IT

Students learn the **Draft → Question → Check → Improve** loop. They use AI to produce a first draft, then must identify two weaknesses in it, then verify any factual claims against two trusted sources, then improve the draft themselves. AI as collaborator, never as ghost-writer.

// TRY THIS AT HOME

If your child uses AI for homework, ask: "What did AI get wrong? How did you fix it?" The right answer is never "nothing."

"The shortcut is the trap. We teach kids to use AI in a way that makes them smarter, not lazier."

– FACULTY NOTE • SMART AI USE

05 • THINKING

Problem Framing

The right problem makes better solutions easier to find.

05

// WHY IT MATTERS

Adults waste most of their time solving the wrong problem. We get the question wrong, then optimise the answer. Children who learn to **frame** a problem before solving it gain a quiet but enormous advantage – in school, in work, and in life.

// HOW WE TEACH IT

Before any project, students write a one-sentence statement: "**The real issue is...**" Faculty critique the framing harder than the solution. Many projects get reframed mid-way; that's the point. Students learn that the first version of a problem is rarely the right one.

// TRY THIS AT HOME

Next time your child says "I have a problem," ask: "What's the real problem?" Sit with the question until the answer changes.

"A clear problem is half a solution. A wrong problem is no solution at all."

– FACULTY NOTE • PROBLEM FRAMING

06 • REAL WORLD

Financial Basics

Money choices shape freedom, stress, options, and future decisions.

06

// WHY IT MATTERS

Most adults learn personal finance the hard way — through credit-card debt, missed savings goals, and panicked retirement maths. A child who understands the relationship between income, choice, and tradeoff at age twelve has a measurable head-start in adulthood.

// HOW WE TEACH IT

From Grade 6 onwards, every student builds a **fake monthly budget** — rent, food, transport, savings, the lot. Each term we throw in a curveball (unexpected medical bill, exciting opportunity) and ask: what gets cut? Money is taught as **choice under constraint**, not as numbers on a page.

// TRY THIS AT HOME

Give your child a small monthly allowance with three rules: save some, spend some, give some. Then leave them alone. The mistakes are the lesson.

"Money is a tool, not a goal. Tools work better when you understand them."

— FACULTY NOTE • FINANCIAL BASICS

07 • WORKING WITH OTHERS

Collaboration

Great teams need people who can listen, disagree, and contribute.

07

// WHY IT MATTERS

Schools talk about "teamwork" and then assign group projects where one child does the work and three put their names on it. We treat collaboration as a real skill — taught, practised, evaluated. Because every interesting thing your child will ever build, they will build with other people.

// HOW WE TEACH IT

Small-batch group projects deliberately put students in mixed-skill teams. The default check-in question is "**what does the team need from me next?**" Faculty evaluate not just the output but the way each student listened, contributed, and handled disagreement.

// TRY THIS AT HOME

When your child complains about a team-mate, resist the urge to side with them. Instead ask: "What does the team need from you right now?" The reframe takes practice — for both of you.

"Solo brilliance is overrated. Honest teamwork is rare, and rarer still in adults."

— FACULTY NOTE • COLLABORATION

08 • AI FLUENCY

Digital Judgment

Online skill is knowing what deserves trust, attention, or silence.

08

// WHY IT MATTERS

Your child will spend most of their adult life consuming information through algorithmic feeds designed to capture attention, not to inform. Without explicit training, even smart adults fall for confident-sounding nonsense. Digital judgment is no longer optional — it's foundational.

// HOW WE TEACH IT

Before sharing or believing any claim, students learn to ask **"who benefits if I believe this?"** They practise on real-world headlines, AI outputs, and viral posts. By Grade 10, they can spot manipulation faster than most adults.

// TRY THIS AT HOME

Next time your child shows you something "crazy" they saw online, ask them: "Who made this? What do they want from us?" Watch their face change.

*"We can't filter the internet for our children. We **can** teach them to filter it themselves."*

— FACULTY NOTE • DIGITAL JUDGMENT

09 • FUTURE READY

Career Navigation

Most opportunities come from clarity, curiosity, and follow-up.

09

// WHY IT MATTERS

The careers your child will hold may not exist yet. The old playbook — pick a track at 17, work hard, retire at 60 — is gone. The new playbook is built one curious conversation at a time. Students who learn to navigate networks, ask for help, and follow up will run circles around those who don't.

// HOW WE TEACH IT

Through our **Talent Farming** programme, Grade 11–12 students build a portfolio and practise messaging real adults in fields they want to learn about. We coach the message, the follow-up, and the gracious thank-you. The hardest part is the first send.

// TRY THIS AT HOME

Ask your child: "Who do you wish you could talk to for thirty minutes?" Then help them write the message. Don't write it for them — that defeats the lesson.

"Careers aren't chosen. They're built — one curious conversation at a time."

— FACULTY NOTE • CAREER NAVIGATION

10 • CHARACTER

Emotional Regulation

Calm is a skill, especially when the moment feels tense.

10

// WHY IT MATTERS

We treat calm as something you're either born with or not — but it's a skill that responds remarkably well to practice. A child who can take a ten-second pause before reacting will, in twenty years, be the adult in the room when everything goes wrong. That is a quiet superpower.

// HOW WE TEACH IT

Our life coach teaches the **ten-second pause** before replying when things feel tense. It's practised in low-stakes moments — a frustrating tutor session, a disagreement with a sibling — so it's available in high-stakes ones. Calm becomes a default, not an aspiration.

// TRY THIS AT HOME

When your child is upset, don't rush to fix it. Sit with them. Say nothing for ten seconds. Then ask: "What do you need first — to be heard, or to find a fix?"

"The pause is the practice. Ten seconds, every time, until it's automatic."

— LIFE COACH NOTE • EMOTIONAL REGULATION

11 • CHARACTER

Adaptability

Future-proof people don't panic when the plan changes.

11

// WHY IT MATTERS

Every plan your child will ever make will fall apart in some way. The question is not how to prevent that — it's how to recover gracefully. Adults who can re-plan when conditions change build careers, businesses, and relationships that compound. Those who cling to old plans get stuck.

// HOW WE TEACH IT

Our project work deliberately changes mid-stream. Briefs shift. Resources disappear. The team-mate who was going to handle the visuals breaks an arm. Students are coached to ask **"what still works?"** — and rebuild from there.

// TRY THIS AT HOME

When something falls apart in your child's day, resist fixing it. Ask: "What still works? What needs to change?" Help them rebuild the plan rather than rebuild it for them.

"Plans are scaffolding, not promises. Adapt the scaffolding and the building still goes up."

— FACULTY NOTE • ADAPTABILITY

12 • THE META SKILL

Learning How To Learn

The best students know how to practise, reflect, and adjust.

12

// WHY IT MATTERS

If your child leaves school knowing only one skill, this is the one we'd choose. The half-life of knowledge is shrinking; what was true ten years ago may be obsolete now. A child who knows **how to learn** can update themselves indefinitely. A child who only knows what they were taught is frozen in time.

// HOW WE TEACH IT

Every week ends with a fifteen-minute reflection ritual. **What worked? What didn't? What will I try next?** Faculty review the reflections, not for grades, but for self-awareness. By Grade 9, students have internalised the practice and run it on themselves – at school, in friendships, in everything.

// TRY THIS AT HOME

On Sunday evenings, ask your child the three questions: what worked this week, what didn't, what will you try differently. Listen. Don't correct. The ritual is the gift.

*"We can't teach them everything. We **can** teach them how to teach themselves anything."*

– FACULTY NOTE • LEARNING HOW TO LEARN

From foundations to *future-ready*.

A consistent thread – strong academics, real-world skills, life skills – runs from Grade 3 all the way to Grade 12. The difficulty and the freedom both grow with the child.

3–5

FOUNDATIONS

Confidence in basics + curiosity-led learning

The youngest learners build literacy, numeracy and a love for asking questions. AI Tutor scaffolding keeps the difficulty just right – never too easy, never overwhelming.

AGES
8–10

6–8

EXPLORE

Concept depth, projects and structured habits

Students move from skill-acquisition into real projects. Financial basics, problem framing and collaboration become everyday vocabulary – not extras.

AGES
11–13

9–10

BUILD CONCEPTS

Mastery and supplementary courses to close gaps

The AI Tutor identifies weak areas with precision. Faculty mentoring deepens. Public speaking, clear writing and digital judgment become non-negotiables.

AGES
14–15

11–12

FUTURE READY

Real-world skills, portfolio and outcomes

Talent Farming peaks: each student builds a portfolio aligned to their strengths. Career navigation, smart AI use and adaptability are practised against real briefs.

AGES
16–18

→ A DEEPER LOOK

Find the spark. *Patiently* fan the flame.

Talent Farming is what makes Aalgorix different in the long run. The AI Tutor handles personalised academics. Faculty handle concept depth. But Talent Farming is where we patiently grow each child's distinct gift — the thing they're more naturally drawn to than anything else.

PHASE / 01**Notice (Grade 3–5)**

We watch. What do they reach for when no-one is asking? A specific kind of problem? A subject they keep coming back to? A creative output? We collect signals quietly.

PHASE / 02**Name (Grade 6–8)**

We name the talent gently with the child. Not as a label, but as a starting point. "You seem to enjoy X — want to explore it deeper?" The child gets a say.

PHASE / 03**Nurture (Grade 9–10)**

Supplementary courses and projects tilted toward the talent. The first portfolio pieces. The child starts to see themselves as a maker, a thinker, a problem-solver in a specific domain.

PHASE / 04**Showcase (Grade 11–12)**

A portfolio that opens doors. Real-world briefs from partner organisations. Mentor introductions where appropriate. By the time the child graduates, they have something to show — not just a transcript to print.

"Every child has a thing. Most schools don't have the patience to find it. We do."

— ON TALENT FARMING

The support that *wraps around* the learning.

An AI Tutor cannot do the human work. Industry faculty, a life coach, and a caring approach to special learning needs hold the whole experience together.

§ FACULTY

Industry-trained educators

Clear explanations, high standards, and expert mentoring from teachers who have worked in the fields they teach. Concept depth that doesn't depend on memorisation.

§ LIFE COACH

The human in the middle

A dedicated coach who knows your child by name. They build the morning rituals, the reflection habits, and the confidence that academic content alone cannot deliver.

§ SPECIAL LEARNING NEEDS

Flexible pacing, closer mentor guidance

We support many learners who need extra attention through personalised pacing, structured routines, and closer mentor guidance. Share your child's needs at admission and we'll recommend the right plan.

§ PARENT REPORTS

Progress you can actually read

Clear, simple updates so parents see growth without supervising every session. No jargon, no surprises, no scrambling to interpret what the numbers mean.

→ BEST-IN-CLASS AI TOOLS

The AI tools that *shape* our curriculum.

We don't depend on one AI. We teach students to work fluently with several — and to choose the right tool for the job.

Six tools. *One AI literacy.*

Canva

VISUAL CREATION

"The skill is not picking one AI. The skill is knowing which one to reach for, when to trust it, and how to check its work. We teach all three."

— ON AI FLUENCY

→ WHAT YOU'LL NEED

A simple home setup.

Nothing fancy.

We've kept the requirements deliberately light. Most families already have what they need. If anything is missing, our admissions team will help you sort it before Day 1.

ESSENTIAL / 01

A laptop or desktop

Any modern laptop works. Chromebooks are fine for Grades 3–8; Grade 9+ benefit from a more capable machine for project work.

ESSENTIAL / 02

Reliable internet

A stable broadband connection (10 Mbps+). Mobile hotspot can work in a pinch but isn't recommended for daily sessions.

ESSENTIAL / 03

A quiet learning corner

It doesn't need to be a separate room. A defined corner with a desk, good light, and minimal distractions does the job beautifully.

ESSENTIAL / 04

Headphones & a webcam

For live faculty sessions and live coach check-ins. Most laptops come with both built-in; external headphones reduce distraction.

// OPTIONAL BUT RECOMMENDED

A simple notebook for reflection rituals. Physical books for offline reading time. A printer for the occasional worksheet or portfolio piece. None of these are required — but parents tell us they make the year smoother.

→ HOW TO ENROL

Four steps, two weeks, *one fit.*

01

Talk to admissions

A 30-minute conversation with our admissions team. We learn about your child — strengths, struggles, what you've tried, what you hope for. No script, no sales pitch. Mostly listening.

DAY 1

02

Try the AI Tutor

Your child takes a short, low-pressure baseline session with the AI Tutor. This isn't an entrance exam — it's a calibration. We learn how to start at the right level on Day 1.

DAY 3-5

03

Personalised plan proposal

We send you a plan: the right grade band, supplementary courses for any gaps, the projected first-term goals, and any special-needs accommodations we're recommending. You decide if it fits.

DAY 7-10

04

Enrol & onboarding week

Once you say yes, we run an onboarding week. Your child meets their life coach, gets oriented to the AI Tutor, and settles into a routine before any real academic load begins.

DAY 14

→ ENROLMENT OPEN • 2027-2028

Ready to build a *future-ready* learning path?

Talk to admissions to find the right programme for Grade 3 to 12. We'll recommend a personalised plan, supplementary courses, and the right mix of academics and real-world skills.
